

AN EXPANDABLE UNIVERSE of teachable themes

"Nelson Telson provides a starting point for any subject I want to develop. This book gives my students rich material for discussion and research. Chapter activity pages focus students' attention while promoting creative and critical thinking. This book is required text for my Life Sciences for Elementary School class at UND."

Lars Helgeson, PhD

"Ms. Mayo manages to imbed both scientific content and ageless themes into a fast moving, emotionally turbulent plot. Fluidly blending ecology, science, physics, history, philosophy, and some profound life lessons, Nelson Telson is one of those rare books that can inspire struggling or reluctant readers toward further study. I would love to see our schools adopt this book."

Carolyn Ehringhaus, PhD

"If you teach ecology, biology, or even Einstein's theory of relativity start your unit with Nelson Telson. The author infuses a fantasy world of talking animals and time travel with well-researched science...As a Consulting Teacher of Reading, I highly recommend this book be added to your classroom library or teaching text set."

Shelley Jitiam, MEd

This lovingly illustrated story captures the hearts and minds of readers young and old alike while taking them places they've never been before, and teaching them many new and important things all along the way.

Painfully shy and lonely, eleven-year-old Mariah Miller hates being a human; she'd rather be an animal so she wouldn't have to go to school and deal with mean old Mrs. Tarbox and her nasty cousin Travis who has invaded her life. Enchantment abounds when she finds a magic spearhead that allows her to talk to a wise old horseshoe crab and a host of other animals. Her dad becomes very ill, and throughout her trials in the real world, she is often surprised by the power of the spearhead. As she travels through time and space, and listens to the wisdom of creatures and people, Mariah makes leaps in her own personal growth, discovers global interconnectedness, how perspective creates reality, and what it really means to be human.

Heidi Mayo lives in Plymouth, MA where she makes and teaches fine art, does her authority duties, and keeps in touch daily with her animal friends on the shoreline.
